

Agreement with TCS on High Performance Computing

Tata Consultancy Services has entered into an agreement with Rajalakshmi Engineering College (REC) to offer their High Performance Computing (HPC) facilities to faculty and students at REC.

Under the terms of this agreement, TCS will offer 6000 node hours of their supercomputing and computer cluster facilities to Faculty members and students at REC to help meet the complex computational requirements in high end research being carried out by them.

The faculty members in the various research groups at REC are involved in several funded research projects ranging from Bio informatics to Computational Fluid Dynamics. These projects involve running applications which are both Computation intensive and data intensive.

The facilities extended by TCS would meet the Complex computational requirements with significant processing time requirements in the various research projects.

REC has now joined a select band of elite institutions in the country who have tapped on to High Performance Computing facilities to further cutting edge research in the Campus.

“Providing our faculty with the right eco system to further research in the Campus has always been in our DNA”, noted, Dr.Thangam Meganthan , Chairperson , Rajalakshmi Institutions.

Thanking TCS on this wonderful initiative, she added , “This facility which TCS has extended to us would definitely be a big value add to the existing high end research infrastructure in the Campus and motivate our Faculty and students to think big in research”.
