# RAJALAKSHMI ENGINEERING COLLEGE (An Autonomous Institution Affiliated to Anna University Chennai) DEPARTMENT OF CIVIL ENGINEERING CURRICULUM REGULATION – 2023 B.E. CIVIL ENGINEERING CHOICE BASED CREDIT SYSTEM

## **VISION:**

To be a department imparting knowledge in Civil Engineering education, research, entrepreneurship and industry outreach services for creating sustainable infrastructure and enhancing quality of life with professional and ethical values.

## **MISSION:**

- To provide an effective teaching learning environment enabling students to be a competent civil engineer.
- To motivate research and entrepreneurial initiatives in the field of Civil Engineering.
- To inculcate ethical values to serve the society with high order professionalism.

## PROGRAMME EDUCATIONAL OBJECTIVES: (PEO's)

- 1. Graduates will possess fundamental knowledge in all fields of Civil Engineering and be able to apply in the profession in Public and Private Sectors.
- 2. Graduates will have knowledge and preparation to tackle real-life Complex Problems and provide sustainable solutions to Civil Engineering Industry.
- 3. Graduates will have the ability to update themselves with developments and new technologies, pursue higher studies to face the Challenges.
- 4. Graduates will become Entrepreneurs, to meet the infrastructural needs of the society, following professional and ethical values.
- 5. Graduates will be enthusiastic in pursuing lifelong learning and involve themselves in Research and Development.

## **PROGRAMME OUTCOMES: (PO'S)** Engineering Graduates will be able to:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering Solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication**: Communicate effectively on complex engineering activities with the Engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## PROGRAM SPECIFIC OUTCOMES: (PSOs)

**PSO 1:** The students will be proficient in the fundamental concepts and apply them to various Civil Engineering projects in Structural Engineering, Geotechnical Engineering, Environmental Engineering, Construction Materials and Management, Transportation Engineering, Water Resources and Management for Sustainable Environment.

**PSO 2:** The students will be competent to solve complex problems using both conventional & modern technologies to prepare cost estimation for Civil Engineering Projects.

**PSO 3:** The students will be skilled professionals to support the society focusing on sustainable development and uphold professional ethics.

| Objectives:  |                   |  |  |  |  |  |
|--|-------------------|--|--|--|--|--|
| To facilitate students develop their comprehension skills  |                   |  |  |  |  |  |
| To enable students to improve their receptive skills   |                   |  |  |  |  |  |
| To equip learners with better vocabulary and enhance their writing skills                        |                   |  |  |  |  |  |
| To aid students speak effectively in all kinds of communicative contexts.                        |                   |  |  |  |  |  |
| To improve the learners' basic proficiency in workplace communication                            |                   |  |  |  |  |  |
|  |                   |  |  |  |  |  |
| UNIT-I DEVELOPING COMPREHENSION SKILLS   | 6                 |  |  |  |  |  |
| <b>Listening</b> : Introduction to Informational listening – Listening to Podcasts, News         |                   |  |  |  |  |  |
| Reading: Short Narratives and Skimming Passages.   |                   |  |  |  |  |  |
| Speaking: Introducing Oneself, Narrating a Story / Incident.                                     |                   |  |  |  |  |  |
| Writing: Sequential Writing (Jumbled Sentences), Process Description                             |                   |  |  |  |  |  |
| Grammar: Verbs – Main & Auxiliary: Simple Tenses – Form, Function and Meaning.                   |                   |  |  |  |  |  |
| Vocabulary: Word formation – Prefix, Suffix, Compound Words.                                     |                   |  |  |  |  |  |
| UNIT-II LISTENING AND EXTENDED READING   | 6                 |  |  |  |  |  |
| Listening: Deep Listening – Listening to Talk Shows and Debates                                  |                   |  |  |  |  |  |
| Reading: In-depth Reading - Scanning Passages  |                   |  |  |  |  |  |
| Speaking: Describing Current Issues, Happenings, etc,  |                   |  |  |  |  |  |
| Writing: Note Making, Note Taking – Paragraph Writing  |                   |  |  |  |  |  |
| Grammar: Continuous Tenses, Prepositions, Articles   |                   |  |  |  |  |  |
| Vocabulary: One Word Substitutes, Phrasal Verbs.   |                   |  |  |  |  |  |
| UNIT-III FORMAL WRITING AND VERBAL ABILITY   | 6                 |  |  |  |  |  |
| Listening: Listening to Lectures and Taking Notes  | <b>L</b>          |  |  |  |  |  |
| Reading: Interpretation of Tables, Charts and Graphs   |                   |  |  |  |  |  |
| Speaking: SWOT Analysis on Oneself   |                   |  |  |  |  |  |
| Writing: Formal Letter Writing and Email Writing   |                   |  |  |  |  |  |
| Grammar: Perfect Tenses, Phrases and Clauses, Discourse Markers                                  |                   |  |  |  |  |  |
| Vocabulary : Verbal Analogy / Cloze Exercise   |                   |  |  |  |  |  |
| UNIT-IV ENHANCING SPEAKING ABILITY   | 6                 |  |  |  |  |  |
| Listening: Listening to eminent voices of one's interest (Martin Luther King, APJ Abdul Kalam, e | tc)               |  |  |  |  |  |
| Reading: Timed Reading, Filling KWL Chart.   | ····)             |  |  |  |  |  |
| Speaking: Just a Minute, Impromptu   |                   |  |  |  |  |  |
| Writing: Check-list, Instructions.   |                   |  |  |  |  |  |
| Grammar: 'Wh' Questions / 'Yes' or 'No' Questions, Imperatives                                   |                   |  |  |  |  |  |
| Vocabulary: Synonyms, Antonyms, Different forms of the same words.                               |                   |  |  |  |  |  |
| UNIT-V LANGUAGE FOR WORKPLACE  | 6                 |  |  |  |  |  |
| Listening: Extensive Listening (Audio books, rendering of poems, etc.)                           | I                 |  |  |  |  |  |
| <b>Reading</b> : Extensive reading (Jigsaw Reading, Short Stories, Novels)                       |                   |  |  |  |  |  |

Common to I sem. B.E. – Aeronautical Engineering, Automobile Engineering, Mechanical Engineering, Mechatronics, Robotics & Automation, Civil Engineering and B.Tech. - Biotechnology, Food Technology & **Chemical Engineering** 

**Objectives:** 

To introduce the matrix techniques and to illustrate the nature of the matrix.

To address data and synthesis of the information to provide valid conclusions.

To explain techniques of calculus which are applied in the solutions of engineering problems.

To analyse special types of integrals by analytical methods and numerical techniques.

To practice the techniques of Integration in finding area and volumes.

#### UNIT-I MATRICES

Matrices - Eigenvalues and eigenvectors - Diagonalization of matrices using orthogonal transformation - Cayley-Hamilton Theorem(without proof) -Quadratic forms- Reduction to canonical form using orthogonal transformation-Numerical computation of Eigen value using Power method

#### UNIT-II FUNCTIONS OF SEVERAL VARIABLES

Partial differentiation-Total derivative-Change of variables-Jacobians-Partial differentiation of implicit functions-Taylor's series for functions of two variables-Maxima and minima of functions of two variables-Lagrange's method of undetermined multipliers.

#### UNIT-III INTEGRAL CALCULUS

Integral Calculus: Definite Integrals as a limit of sums - Applications of integration to area, volume - Improper integrals: Beta and Gamma integrals - Numerical computation of integrals: Trapezoidal rule - Gaussian Two point quadrature 12

#### UNIT-IV MULTIPLE INTEGRALS

Double integrals - Change of order of integration - Area enclosed by plane curves-Triple integrals-Volume of solids- Numerical computation of double integrals: Trapezoidal rule.

#### UNIT-V REGRESSION

Scatter diagram - Karl Pearson coefficient of correlation for raw data -Spearman rank correlation coefficient - Lines of regression - Regression equation X on Y and Y on X- Curve fitting by Principle of least squares - Fitting a straight line y = ax+b and a parabola  $y = ax^2 + bx + c$ .

### **Total Contact Hours:60**

12

12

#### **Course Outcomes:**

On completion of the course students will be able to:

- Demonstrate the matrix techniques in solving the related problems in engineering and technology.
- Analyse and interpret data, and synthesize information to provide valid conclusions. •
- Interpret the problems in Engineering and Technology using the principles of mathematical calculus. •
- Apply the analytical methods and numerical techniques to solve the related engineering problems.
- Evaluate multiple integrals to conduct investigations of complex problems.

#### SUGGESTED ACTIVITIES

Problem solving sessions Activity Based Learning

Implementation of small module

#### SUGGESTED EVALUATION METHODS

Problem solving in Tutorial sessions

Assignment problems

Quizzes and class test

Discussion in classroom

#### **Objectives:**

- To acquire knowledge on the classification, testing methods and properties of bricks and stones. ٠
- To identify the different types of cement and lime based on the testing methods as per IS code for specific applications.
- To choose appropriate proportion of mortar and concrete based on the strength requirements. •
- To characterize the timber products, steel and Aluminium that could be used as building material ٠
- To appraise the properties and uses of advanced materials apart from conventional ones used in construction. ٠

#### UNIT-I **STONES & BRICKS**

Building Stones: Classification of stones- Characteristics of good building stones, important types of building stones, their properties and uses – aggregates.

Brick and other Clay Products: Composition of brick-earth, manufacturing process of bricks, characteristics of good building bricks, classification and testing of bricks, special types of bricks and their uses. Types of tiles and theiruse in buildings. Terracotta, stoneware 0

#### LIME AND CEMENT UNIT-II

Lime and Cement: IS classification of lime and uses, chemical composition of cement, IS specifications and tests on Portland cement, Manufacture Process-different types of cements and their uses.

#### UNIT-III MORTAR AND CONCRETE

Mortar and Concrete: Preparation of cement mortar and concrete for different types of works, factors affecting strength of concrete, types of concrete- Admixtures and their specific use.

#### UNIT-IV TIMBER & STEEL

Timber and Wood Based Products: Classification of timber trees, cross section of exogenous tree, hard wood and soft wood, seasoning of timber, ply wood and its uses.

Steel and Aluminium: Types of steel-mild steel, high carbon steel, high strength steel properties and uses, light Gauge steel, commercial forms of steel and aluminium and their uses.

#### UNIT-V OTHER MATERIALS

Introduction to Advanced Materials: Ferro cement, FRP, FAL-G brick, plastics, Lightweight Blocks, paints, and geotextiles.

### **Total Contact Hours: 45**

9

### **Course Outcomes:**

On completion of the course, the student will be able to

Classify and characterize building stones, bricks and will know the manufacturing process of bricks ٠

- Comprehend the manufacturing process lime, cement and will know the types of cement •
- Select appropriate admixtures to proportion the concrete and mortar for customized applications. •
- Recognize the preservation methods of timber and metals .
- Identify the advanced Civil Engineering materials and the appropriate usage in construction practice •

### SUGGESTED ACTIVITIES (if any) (UNIT/ Module Wise) - Could suggest topic

Seminar on new material that is not included in this module.

Case study of various building materials used in an ongoing project with a suggestion of alternate materials that can be used with justification.

SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) - could suggest topic A project report on the above mentioned case study.

| CE23112     | ENGINEERING DRAWING FOR CIVIL ENGINEERS | PC       | 2 | 0 | 4 | 4 |

#### **Objectives:**

- To develop knowledge on basic drawing and Standards ٠
- To expose them to know about different Building Components.
- To improve their visualization skills so that they can apply these skills in developing new products. •
- To improve their technical communication skill in the form of building bye-laws & submission of drawings •
- To Understand the regulation and requirement of building as per National Building Code •

#### **INTRODUCTION & BASIC DRAWINGS** UNIT-I

Use of Drafting Instruments - BIS Conventions and Specifications - Size, Layout and Folding of Drawing Sheets Lettering and Dimensioning - Symbols - Types of Views - Layout of Views - Title Block - Scales - Principal Planes, Projection of Points using Four Angles of Projection, Projection of Straight Lines - Lines parallel or inclined to one plane - Projection of Plane - Inclined to any one Principal Plane - Panelled & Flush door - window 12

#### UNIT-II **BUILDING COMPONENTS**

Types of Structures - Foundation and its types - Bricks, Blocks & Bonds - Beam-Column Joint - Lintel-cum-Sunshade - Steel roof truss - Rain water harvesting - Material Symbols (Hatch).

#### UNIT-III **ISOMETRIC & PERSPECTIVE VIEWS PROJECTION AND FREE HAND SKETCH**

Isometric & Perspective Views and Projections - Visualization concepts and Free Hand sketching:-Representation of Three Dimensional objects - Freehand sketching of multiple views from pictorial views of objects.

#### UNIT-IV | BUILDING BYE-LAWS & SUBMISSION OF DRAWINGS

Objects of bye-laws- Importance of bye-laws- Function of local authority- Setbacks - Plot Coverage- Number of floors-Height of building- Built up Area- Floor space index (FSI) - Views and details necessary for the preparation of a civil engineering drawing- Site Plan - Necessity for Approval of plans from local body- Layout plan and key plan-Requirements for submission of drawing for approval.

#### UNIT-V **BUILDING DRAWINGS**

Requirements of a building planning as per NBC (residential and public) - Plan, Section and Elevation of different buildings.

#### **Total Contact Hours:60**

#### **Course Outcomes:**

On completion of the course, the student will be able to

- comprehend to draw the basic building components.
- draw the building structural member and symbols used. ٠
- visualize and prepare Isometric & Perspective view and free hand sketch. •
- draw the building as per Necessity for Approval. •
- draw the Plan, Section and Elevation of building. •

#### SUGGESTED ACTIVITIES (if any) (UNIT/ Module Wise) – Could suggest topic

Problem solving sessions – All Five units

Activity Based Learning - Model Making

SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) - could suggest topic

Tutorial problems

Assignment problems

| On c   | On completion of the course, the student will be able to  |  |  |  |  |  |  |  |  |
| $\Box$ | perform plumbing activities for residential and industrial buildings considering safety aspects while gaining clear<br>understanding on pipeline location and functions of joints like valves, taps,<br>couplings, unions, reducers, elbows, etc. |  |  |  |  |  |  |  |  |
|        | perform wood working carpentry activities like sawing, planning, cutting, etc. while havingclear understanding of the joints in roofs, doors, windows and furniture.  |  |  |  |  |  |  |  |  |
|        | produce joints like L joint, T joint, Lap joint, Butt joint, etc. through arc welding process whileacquiring in depth knowledge in the principle of operation of welding and other accessories  |  |  |  |  |  |  |  |  |
|        | perform operations like Turning, Step turning, Taper turning, etc. in lathe and Drilling operationin drilling machine   |  |  |  |  |  |  |  |  |
| $\Box$ | perform sheet metal operations like Forming, Bending, etc. and fabricating models like Trays, funnels, etc.   |  |  |  |  |  |  |  |  |

#### List of equipment and components

### (For a Batch of 30 Students)

### CIVIL

- 1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings 15 Sets.
- 2. Plumbing vice (fitted to work bench) -15 Nos.
- 3. Carpentry vice (fitted to work bench) 15 Nos.
- 4. Standard woodworking tools 15 Sets.
- 5. Models of industrial trusses, door joints, furniture joints 5 each
- 6. Power Tools:
  - (a) Rotary Hammer 1 No.
    - (b) Circular Saw 1 No.
    - (c) Electric Planer 1 No.
    - (d) Hand Drilling Machine 1 No.
    - (e) Jigsaw 1 No.
    - (f) Cutoff Machine 1 No.

#### MECHANICAL

1. Arc welding transformer with cables and holders - 5 Nos.

2. Welding booth with exhaust facility - 5 Nos.

3. Welding accessories like welding shield, chipping hammer, wire brush, etc. - 5 Sets.

4. Oxygen and acetylene gas cylinders, blow pipe and other welding outfit - 1 No.

5. Centre lathe - 5 Nos.

6. Standard Sheet metal working tools – 2 sets

7. Study-purpose items: centrifugal pump, air-conditioner – 1 each.

#### **Course Outcomes:**

On completion of the course, the student will be able to

- Associate air and noise quality standards with environment and human health.
- Illustrate the significance of water and devise control measures for water pollution.
- Analyze solid wastes and hazardous wastes.
- Outline the goals of sustainable development in an integrated perspective.
- Comprehend the significance of environmental laws.

#### SUGGESTED EVALUATION METHODS

- Continuous assessment tests
- Assignments
- Case studies, class room presentations (or) site visit

#### Text Book(s):

Benny Joseph, 'Environmental Science and Engineering', Tata McGraw-Hill, New Delhi, 2016

Anubha Kaushik and C. P. Kaushik's "Perspectives in Environmental Studies", 6th Edition, New Age International Publisher, 2018.

Johri R., E-waste: implications, regulations, and management in India and current global best practices, TERI Press, New Delhi

| and<br>B. Tech. – Biotechnology, Food Technology & Chemical Engineering  |   |  |  |  |  |  |  |  |  |  |  |  |

**Objectives:** 

To provide students with an introduction to the theory of ordinary differential equations through applications, methods of solution, and numerical approximations.

To introduce students to how to solve linear Partial Differential with different methods.

To enable the students to study the Laplace Transforms, properties of Laplace Transform, inverse Laplace Transform and some applications to solve the differential equations and integral equations.

To explain the concept of a vector integration in a plane and in space.

To describe basic properties of complex variables and to have the ability to compute complex integrals.

#### **UNIT-I ORDINARY DIFFERENTIAL EQUATIONS**

Second and higher order Linear differential equations with constant coefficients - Method of variation of parameters -Legendre's linear equations - Numerical solution of ODE - Single Step methods: Taylor's series method, Euler's method. 12

#### UNIT-II PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations - Classification of PDE - Solutions of standard types of first order partial differential equations - Lagrange's linear equation -Linear homogeneous partial differential equations of second and higher order with constant coefficients.

#### UNIT-III LAPLACE TRANSFORM

Laplace transform -Basic properties - Transforms of derivatives and integrals of functions - Transforms of unit step function and impulse functions, periodic functions. Inverse Laplace transform – Problems using Convolution theorem - Solution of linear ODE of second order with constant coefficients using Laplace transformation techniques

#### UNIT-IV VECTOR CALCULUS

Gradient, divergence and curl - Directional derivative - Irrotational and Solenoidal vector fields - Vector integration - Green's theorem in a plane, Gauss divergence theorem and Stokes' theorem (excluding proofs) - Simple applications involving cubes and rectangular parallelopipeds.

#### UNIT-V **COMPLEX VARIABLES**

Analytic functions — Construction of analytic function - Bilinear transformation -Singularities - Cauchy's integral theorem (without proof) - Residues - Residue theorem (without proof) - Simple problems - Contour integral over |z|=1.

#### **Total Contact Hours: 60**

12

12

12

12

#### **Course Outcomes:**

On completion of the course students will be able to:

- Apply the methods as a potent tool in the solution of a variety of problems in the natural sciences and technology.
- Develop specific methodologies, techniques and resources in Partial differential equations to conduct research andproduce innovative results in the area of specialisation.
- Use Laplace transform and inverse transform techniques to solve the complex problems in engineering and • technology.
- Apply the concepts in multivariable analysis, including space curves; directional derivative; gradient; • multipleintegrals; line and surface integrals; vector fields; divergence, curl ; the theorems of Green and Stokes, and the divergence theorem in different fields of engineering.
- Demonstrate the concept of Analytic functions, conformal mapping and complex integration in solving Engineering problems.

### SUGGESTED ACTIVITIES

Problem solving sessions

|             |   |          |   |   |   |   |
|             | Common to Mech, Aero, Auto, Civil and MCT |          |   |   |   |   |

| Obje | ctives: The students can be able to   |
|------|---|
| •    | To understand the basics of mechanics and apply the concept of equilibrium of system of forces. |
| •    | To understand the concept of equilibrium and to solve problems of rigid bodies.                 |
| •    | To learn about the centroid and centre of gravity of objects and moment of inertia              |
| •    | To learn the basic concepts of friction.  |
| •    | To learn the concepts in kinematics and kinetics of rigid bodies in plane motion.               |

#### UNIT-I STATICS OF PARTICLES

Introduction – Units and Dimensions – Laws of Mechanics – Lami's theorem, Parallelogram and triangular Law of forces – Resolution of forces – Vector operations of forces - Coplanar Forces – rectangular components – Equilibrium of a particle – Forces in space – Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility.

#### UNIT-II EQUILIBRIUM OF RIGID BODIES

Free body diagram – Types of supports –Action and reaction forces –stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem – Single equivalent force - Equilibrium of Rigid bodies in two dimensions – Equilibrium of Rigid bodies in and three dimensions(class room lecture only) – (Descriptive treatment only)

#### UNIT-III PROPERTIES OF SURFACES AND SOLIDS

Centroids - First moment of area – Second moment of area and centre of mass – Centroids of lines and areas - Rectangular, circular, triangular areas by integration – T section, I section, Angle section, Hollow section by using standard formula –Theorems of Pappus - Area moments of inertia of plane areas – Rectangular, circular, triangular areas by integration – T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Principal moments of inertia of plane areas – Principal axes of inertia-Mass moment of inertia –mass moment of inertia for prismatic, cylindrical and spherical solids from first principle – Relation to area moments of inertia.

### UNIT-IV DYNAMICS OF PARTICLES

Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion - Newton's laws of motion – Work Energy Equation– Impulse and Momentum – Impact of elastic bodies.

### UNIT-V FRICTION AND RIGID BODY DYNAMICS

Friction force – Laws of sliding friction - Characteristics of dry friction – equilibrium analysis of simple systems with sliding friction – wedge friction, Ladder friction, Rolling resistance -Translation and Rotation of Rigid Bodies – Velocity and acceleration – General Plane motion of simple rigid bodies such as cylinder, disc/wheel and sphere. Total Contact Hours: 45

Course Outcomes: Upon completion of this course, the students will be able to: Analyze the forces in the system and to understand vectorial and scalar representation of forces and moments CO1 Study about the rigid body in equilibrium and to analyze the problems in engineering systemsusing the CO<sub>2</sub> concept of static equilibrium Determine the properties of surfaces and solids by means of finding centroid, centre of gravityand moment CO3 of inertia. CO4 Solve problems involving kinematics and kinetics of rigid bodies in plane motion. Solve problems involving frictional phenomena in machines by understanding the concept offriction and CO5 the effects by the laws of friction **Text Books:** Beer, F.P and Johnston Jr. E.R, Cornwell and Sanghi ., "Vector Mechanics for Engineers (In SI Units): Statics and Dynamics", 12th Edition, McGraw-Hill Publishing company, New Delhi (2018).

Determination of cloud and pour points of lubricating oil

Determination of molecular weight of a polymer by viscometry method

Synthesis of nanomaterials by simple precipitation method

Determination of phase change temperature of a solid

Determination of strength of an acid in Pb acid battery

Synthesis of biodiesel

Determination of acid value of biofuel

**Course Outcomes:** At the end of the course the student will be able to:

- Explain and the fundamental concepts of corrosion, its control and surface modification methods such as electroplating and electroless plating
- Apply the concept of phase rule in alloying and predict its thermal properties

• Identify the different types of plastics and composite materials of industrial importance

- Categorize the types of fuels and the energy storage devices
- Synthesize nanomaterials for modern engineering and technology

### SUGGESTED ACTIVITIES

Electroplating of desired metal on substrate. Synthesis of biodiesel

#### SUGGESTED EVALUATION METHODS

Continuous assessment tests

Assignments

Model lab examination

End semester examination

• To introduce the students to draft the plan, elevation and sectional views of buildings in accordance with developmentand control rules satisfying orientation and functional requirements as per National Building Code.

### **Description of the Experiments**

Introduction to AutoCAD tools and commands.

NBC provisions and Bye-laws for building planning, orientations, lighting and ventilation.

Preparation of key plan and site plan.

Introduction to building components such as foundation, super structure, roof, staircase, doors and windows.

Plan, Section and Elevation of a single floor residential building - load bearing structure.

Plan, Section and Elevation of a residential building - framed structure.

Plan, Section and Elevation of a Primary health center.

Plan, Section and Elevation of an Industrial building.

Preparing approval plan as per the regulations.

Introduction to BIM.

### **Course Outcomes:**

On completion of the course, the students will be able to

- Employ various AutoCAD tools and commands.
- Plan the buildings based on NBC and Bye-laws
- Prepare plan, section and elevation for different types of load bearing buildings
- Prepare plan, section and elevation for framed buildings.
- Prepare approval plan for buildings.

## SUGGESTED EVALUATION METHODS

To facilitate the learners in acquiring listening and reading competence

To enable the learners to communicate effectively through written and oral medium

To assist the learners in preparing for competitive examinations

To train the students in acquiring corporate skills

To inculcate professional standards among the students and make them realize their responsibility in addressing the challenges

#### **UNIT-I RECEPTIVE SKILLS**

Listening - Comprehensive Listening - Watching the news - Listening to a peer giving presentation, etc. - Critical Listening - Watching a televised debate, Listening to poems - Reading - Extensive Reading - Short stories and Oneact Plays - Intensive Reading - Articles or Editorials in Magazines, Blog posts on topics like science and technology, arts, etc.

#### **UNIT-II** PRODUCTIVE SKILLS

Speaking – Demonstrative Speaking – Process description through visual aids – Persuasive Speaking – Convincing the listener with the speaker's view - Writing - Descriptive Writing - Describing a place, person, process -Subjective Writing – Autobiography, Writing based on personal opinions and interpretations 6

UNIT-III ENGLISH FOR COMPETITIVE EXAMS

An introduction to International English Language Testing System (IELTS) – Test of English as a Foreign Language (TOEFL) - Graduate Record Examination (GRE) - Civil Service, Indian Economic Service Examination, Indian Statistical Service Examination, Combined Defence Services Examination, Staff Selection- (Language Related) -Aptitude tests. 6

#### UNIT-IV **CORPORATE SKILLS**

Critical Thinking and Problem Solving - Case Study, Brainstorming, Q & A Discussion - Team work and Collaboration - Activities like Office Debates, Perfect Square, Blind Retriever, etc. - Professionalism and Strong Work Ethics - Integrity, Resilience, Accountability, Adaptability, Growth Mind set. 6

#### **PROJECT WORK** UNIT-V

Case Study based on the challenges faced by the employers and the employees – Devise Plan, Provide Solution

**Total Contact Hours: 30** 

### **Course Outcomes:**

On completion of the course students will be able to

interpret and respond appropriately in the listening and reading contexts.

express themselves effectively in spoken and written communication

apply their acquired language skills in writing the competitive examinations

exhibit their professional skills in their work place

identify the challenges in the work place and suggest strategies solutions

### SUGGESTED ACTIVITIES

Online Quizzes on Vocabulary Online Quizzes on grammar **Communication Gap Exercises** Presentations Word Building Games Case study

### SUGGESTED EVALUATION METHODS Assignment topics Ouizzes

Class Presentation/Discussion Continuous Assessment Tests

Text Book(s):

How to Read Better & Faster, Norman Lewis, Goyal Publishers

Teaching Speaking: A Holistic Approach, Book by Anne Burns and Christine Chuen Meng Goh, Cambridge University Press

The Official Cambridge Guide To IELTS by Pauline Cullen, Cambridge University Press

The 7 Habits of Highly Effective People by Stephen Covey, Simon and Schuster, UK

| MC23111  | INDIAN CONSTITUTION AND FREEDOM MOVEMENT | MC       | 3 | 0 | 0 | 0 |  |  |  |
| Common to all branches of B.F/B. Tech Programmes – First / Second/third Semester |  |          |   |   |   |   |  |  |  |

To apprehend the sacrifices made by the freedom fighters.

To inculcate the values enshrined in the Indian constitution.

To instil a sense of responsibility as the citizens of India.

To familiarize about the functions of the various levels of Government.

To be informed about Constitutional and Non- Constitutional bodies.

#### UNIT-I **INDIAN FREEDOM MOVEMENT**

British Colonialism in India-Colonial administration till 1857- Revolt of 1857- Early Resistance to British Rule-Rise of Nationalism in India-Indian Freedom Struggle under Mahatma Gandhi-Non- Cooperation Movement-Civil Disobedience Movement- Ouit India Movement-British Official response to National movement- Independence of India Act 1947-Freedom and Partition. 9

#### UNIT-II CONSTITUTION OF INDIA

Historical Background – Indian Constitution: Constitution' meaning of the term, Sources and constitutional history, Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights - Directive Principles of State Policy - Fundamental Duties - Citizenship - Constitutional Remedies for citizens. 9

#### STRUCTURE AND FUNCTIONS OF CENTRAL GOVERNMENT UNIT-III

Union Government - Structure of the Union Government and Functions - President - Vice President - Prime Minister - Cabinet - Parliament - Supreme Court of India - Judicial Review.

| UNIT-IV      | STRUCTURE AND FUNCTION OF STATE GOVERNMENT AND LOCAL BODY  | 9 |
|--------------|--|---|
| State Govern | nment - Structure and Functions - Governor - Chief Minister - Cabinet - State Legislature - Judicial | l |
| System in St | tates - High Courts and other Subordinate Courts- Role and Importance, Municipalities: Introduction, | , |
| ۱<br>۱       |  |   |

Mayor and role of Elected Representative, CEO of Municipal Corporation, Pachayati Raj: Introduction, Elected officials and their roles, Village level: Role of Elected and Appointed officials.

**UNIT-V CONSTITUTIONAL FUNCTIONS AND BODIES** 

Indian Federal System - Centre - State Relations - President's Rule - Constitutional Functionaries - Assessment of working of the Parliamentary System in India- CAG, Election Commission, UPSC, GST Council and other Constitutional bodies-. NITI Aayog, Lokpal, National Development Council and other Non -Constitutional bodies.

Total Contact Hours: 45

0

0

Course Outcomes: Upon completion of the course, students will be able to:

appreciate the sacrifices made by freedom fighters during freedom movement.

be responsible citizens and abide by the rules of the Indian constitution.

be aware of the functions of the Indian government.

be knowledgeable about the functions of the state Government and the Local bodies.

apply the knowledge on constitutional functions and role of constitutional bodies and non-constitutional bodies.

### SUGGESTED ACTIVITIES

Famous speeches from around the world relating to independence Case study Quiz on Portfolio and Cabinet Discussions on International Associations like the UN, BRICS, QUAD Presentation on issues around the world

### SUGGESTED EVALUATION METHODS Assignment topics Ouizzes

Class Presentation/Discussion Continuous assessments (CAT) Text Book(s):

M. Laxmikanth, "Indian Polity:, McGraw-Hill, New Delhi.

Durga Das Basu, "Introduction to the Constitution of India ", Lexis Nexis, New Delhi. 21sted 2013.

|-------------|------------------------------|----------|---|---|---|---|
| CE23312     | FLUID MECHANICS              | PC       | 3 | 0 | 0 | 3 |

To provide fundamental knowledge of fluids, its properties and study of fluid at rest. •

To acquire knowledge on kinematics of fluid, dynamics of fluids concepts in Euler's and Bernoulli equations. •

- To analyze flow through pipes in a flow system. •
- To obtain knowledge on boundary layer thickness and separation. •
- To enhance knowledge on dimensional analysis and model studies. •

#### FLUID PROPERTIES AND FLUID STATICS **UNIT-I**

Properties of fluid - Mass density - Specific weight - Specific volume - Specific gravity - Viscosity - Vapour pressure - Compressibility and elasticity - Surface tension - Capillarity - Fluid statics - Fluid pressure and measurement - simple and differential- Forces on plane and curved surfaces - Buoyancy and floatation - Stability of floating bodies.

#### UNIT-II FLUID KINEMATICS AND FLUID DYNAMICS

Classification of flows - Streamline, streak-line and path-lines - Stream function - Velocity potentials - Flow nets -Euler's equation of motion along a stream line - Bernoulli's equation

UNIT-III FLOW THROUGH PIPES 9 Reynolds experiment - Laminar flow through circular pipe - Darcy-Weisbach equation - Moody diagram - Major and minor losses in pipe flow - Total energy line - Hydraulic gradient line - Pipes in series and parallel- Equivalent pipes UNIT-IV BOUNDARY LAYER 9

Boundary layer - boundary layer on a flat plate - laminar and turbulent boundary layer - displacement, energy and momentumthickness - Momentum integral equation-Boundary layer separation and control - drag on flat plate. 0

#### DIMENSIONAL ANALYSIS AND MODEL STUDIES UNIT-V

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pi theorem - dimensionless parameters - similitudes and model studies - distorted models.

### Total Contact Hours: 45

9

9

### **Course Outcomes:**

On completion of the course, the student will be able to

- Apply the concept of basic properties of fluids and behavior of fluids at rest and its applications in real world problems
- Compute the rate of flow through pipes and the concept of Bernoulli's equation to solve a variety of fluid flow • problems.
- Estimate the major and minor losses in pipe flow and calculate the flow through pipes connected in series and in parallels
- Compute the boundary layer thickness and its separation during different types of fluid flow •
- Employ the knowledge in dimensional analysis and model studies in real time •

### SUGGESTED ACTIVITIES

Problem solving sessions – All units

- To gain insight about concrete mixing design, testing procedures, building materials, and the concreting process.
- To impart knowledge on the construction practices and techniques for foundations, masonry, formwork, weather and water proofing.
- To apply advanced techniques for underground construction, including tunneling, deep excavations, dewatering in complex geotechnical environments.
- To enable critical evaluation on the erection of complex structures, including heavy decks, offshore platforms while optimizing material handling and support structures for efficiency and safety.
- To assess factors influencing equipment selection, optimize cost-efficiency and maintenance strategies, and apply appropriate equipment for diverse construction tasks.

### UNIT-I CONCRETE TECHNOLOGY

Concrete – Mix and Grades of concrete - manufacturing of concrete – Batching – mixing – transporting – placing – compaction of concrete – curing and finishing - Extreme Weather Concreting – Under water concreting - Ready Mix Concrete - Non-destructive testing – Mixdesign – IS method – ACI method – Defects in concrete – Bleeding, Laitance and segregation.

### UNIT-II CONSTRUCTION PRACTICES

Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork – Masonry types – Bonds in masonry – Flooring (VDF) – damp proof courses – Joints in concrete – Building foundations – basements – Formwork techniques – shuttering and de-shuttering – slip forms – scaffoldings – weather and water proof.

### UNIT-III SUB STRUCTURE CONSTRUCTION

Techniques of Box jacking – Pipe Jacking - Tunneling techniques – Special piling techniques - well and caisson - cofferdam - cable anchoring and grouting - Need for deep excavations, susceptibilities of deep excavations- shoring for deep cutting - Applications and Construction of deep diaphragm walls - Well points - Dewatering and stand by Plant equipment for underground open excavation.

### UNIT-IV | SUPER STRUCTURE CONSTRUCTION

Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks.

### UNIT-V CONSTRUCTION EQUIPMENT

Factors affecting Selection of equipment – Cost and maintenance - Earthwork equipment – Equipment for Graders, Scrapers and Rollers - Equipment for foundation and pile driving - Equipment for compaction and concreting -Equipment for material handling and erection of structures – Equipment for dewatering - Equipment for dredging, trenching, tunneling.

### **Total Contact Hours: 45**

inte

### **Course Outcomes:**

On completion of the course, the student will be able to

- Analyze, design, and evaluate concrete mixes and processes, apply advanced testing methods, and address defects to ensure durable and sustainable concrete structures.
- Coordinate construction processes, implement advanced formwork and masonry techniques, and analyze
  methods for ensuring structural durability and weatherproofing.
- Comprehend advanced underground construction techniques, design solutions for deep excavations and dewatering, and ensuring safety and stability in complex geotechnical scenarios.
- Apply construction techniques for complex structures, design efficient material handling and erection strategies, and analyze support systems for heavy and lightweight components.
- Analyze and optimize the selection, operation, and maintenance of construction equipment, evaluate costefficiency, and design solutions for diverse applications.

Common to III sem. B.E. – Civil Engineering, Mechanical Engineering and Automobile Engineering

### **Objectives:**

To express Fourier series to study the behaviour of periodic functions and their applications in system communications, digital signal processing and field theory.

To represent continuous function arising in wave and heat propagation, signals and systems using Fourier Transforms.

To provide numerical techniques in solving the boundary value problems.

To formulate and test a hypothesis, using critical values to draw conclusions and determining probability of making errors in hypothesis tests.

To provide the necessary basic concepts of a few statistical methods in designing and solving problems.

#### FOURIER SERIES UNIT-I

Dirichlet's conditions - General Fourier series - Odd and even functions - Half range sine series - Half range cosine series -Parseval's identity - Harmonic analysis.

#### UNIT-II FOURIER TRANSFORMS

Statement of Fourier integral theorem - Fourier transform pair - Fourier sine and cosine transforms - Properties -Transforms of simple functions - Convolution theorem - Parseval's identity - Application to boundary value problems.

#### **BOUNDARY VALUE PROBLEMS** UNIT-III

Solution of one dimensional wave equation with one non zero boundary conditions- Finite difference techniques for the solution for PDE - One Dimensional Wave Equation by Explicit method - One dimensional equation of heat conduction - Numerical computation :Heat flow equation by implicit and explicit methods 9

#### UNIT-IV STATISTICAL TESTING

Maximal Likelihood estimation - Parameters of Binomial and Poisson distribution - Tests of significance - Z test: Single mean, difference of means- Chi square - F test.

#### UNIT-V ANOVA

Design of Experiments - Completely randomized design - Randomized block design - Latin square design.

### **Course Outcomes:**

On completion of course students will be able to Demonstrate Fourier series to study the behaviour of periodic functions and their applications in engineering problems such as system communications, digital signal processing and field theory. Apply the shifting theorems, Fourier integral theorems, Inverse Fourier sine and cosine transforms appropriate problems in engineering and technology. Solve differential equations numerically that arise in course of solving complex engineering problems. • Formulate, test and interpret various nonparametric tests for problems in engineering and technology. That is, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. Design of experiments using suitable ANOVA techniques and draw conclusions.

### SUGGESTED ACTIVITIES

Problem solving sessions Activity Based Learning Test of hypothesis and ANOVA using online calculator.

### SUGGESTED EVALUATION METHODS

Problem solving in Tutorial sessions Assignment problems Quizzes and class test

Discussion in classroom

- To impart knowledge on open channel flow and its characteristics.
- To provide a comprehensive understanding of the functions, working principles, and structural components of diversion headworks, regulators, canal escapes, outlets and cross-drainage works.
- To explore the gradually varied flow and its profiles.
- To analyze the rapidly varying flow.
- To evaluate the performance and characteristics of centrifugal pumps and Pelton turbine.

### UNIT-I OPEN CHANNEL FLOWS

Types of open channel flow – Characteristics of open channel - Velocity distribution in open channel - Steady uniform flow: Chezy's equation, Manning's equation - Best hydraulic sections for Uniform flow – Wide open channel.

### UNIT-II DIVERSION HEAD WORK AND REGULATORS

Weir and Barrage – Gravity and Non –gravity weir- Layout of a diversion head works and its components – Under sluice –Divide wall- River training works- fish ladder. Canal regulation works –Distributary Head regulator and cross regulator- Types of canal escapes – Types of outlets - cross drainage works

# UNIT- GRADUALLY VARIED FLOW

Specific energy - Critical flow, Subcritical and Super Critical flow-Dynamic equations of gradually varied flows – Classification of flow profiles –Profile determination by Direct step method and Standard step method.

### UNIT-IV RAPIDLY VARIED FLOW

Application of the momentum equation for RVF - Hydraulic jumps - Types - Energy dissipation – Positive and Negative surges.

### UNIT-V PUMPS AND TURBINES

Classification of Pumps - Centrifugal pumps – Work done - Minimum speed to start the pump - Multistage pumps – Characteristics curve. Classification of Turbines – Pelton wheel - Draft tube and cavitation - Specific speed – Characteristic Curves of Turbines.

### **Total Contact Hours: 45**

### **Course Outcomes:**

On completion of the course students will be able to

- Explain the principles and computations of open channel flow, including velocity distribution, hydraulic sections, and flow characteristics.
- Analyze the functions and components of diversion headworks, regulators, canal escapes, outlets and cross drainage works.
- Analyze gradually varied flow profiles using dynamic equations and standard computation methods.
- Assess rapidly varying flows and their practical applications, including hydraulic jumps and surges.
- Determine performance characteristics of pumps and turbines, including specific speed.

### SUGGESTED ACTIVITIES (if any) (UNIT/ Module Wise) – Could suggest topic Problem solving sessions - Best hydraulic sections for Uniform flow Flipped classroom - Diversion head works Activity Based Learning - Flow profiles

SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) – could suggest topic

Tutorial problems - Unit I, Unit III to Unit V Assignment problems - Unit I, Unit III to Unit V

Quizzes - All Units

Class Presentation/Discussion – Unit -II

| CE23413     | WATER SUPPLY ENGINEERING     | PC       | 3 | 0 | 0 | 3 |

- To understand supply and demand concepts, to quantify water, to comprehend water characteristics and to know regulatory standards.
- To design water supply mains, understand how it is laid, jointed and tested and to know pipe materials, pumps and appurtenances.
- To know the principles, functions, construction, operation and maintenance aspects of water treatment units.
- To become familiarized with the principles, functions, operation and maintenance aspects of advanced water treatment methods.
- To determine the requirements of water distribution, design of service reservoirs, water distribution networks, house service connection and pipe fittings & fixtures.

### UNIT-I SOURCES OF WATER

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir – Development and selection of source – Source Water quality – Characterization – Significance – Drinking Water quality standards, quality of water for swimming pools.

### UNIT-II CONVEYANCE FROM THE SOURCE

Water supply – intake structures – Functions, Pipes and conduits for water – Selection of Pipe materials – Hydraulics of flow in pipes – Transmission main design – Laying, jointing and testing of pipes – appurtenances – Types and capacity of pumps – Selection of pumps.

### UNIT-III WATER TREATMENT

Objectives – Unit operations and processes – Principles, functions and design of water treatment plant units, aerators of flash mixers, Coagulation and flocculation – Clariflocculator - Plate and tube settlers - Pulsator clarifier - sand filters - Disinfection - Construction, Operation and Maintenance aspects.

### UNIT-IV ADVANCED WATER TREATMENT

Water softening – Desalination - R.O. Plant – demineralization – Adsorption - Ion exchange– Membrane Systems – Iron and Manganese removal - Defluoridation – Removal of Arsenic - Operation & Maintenance aspects – Recent advances.

### UNIT-V WATER DISTRIBUTION AND SUPPLY

Requirements of water distribution – Components – Service reservoirs– Functions – Network design – Economics – Analysis of distribution networks - Computer applications – Leak detection. Principles of design of water supply in buildings – House service connection – Fixtures and fittings, systems of plumbing and types of plumbing, effects of Corrosion in pipes and its prevention.

### **Total Contact Hours: 45**

0

11

8

8

### **Course Outcomes:**

On completion of the course, the students will be able:

- Estimate water demand, forecast future population, comprehend water characteristics & water quality standards.
- Design water transmission pipes, to understand laying, jointing and testing of pipes, appurtenances and pumps.
- Design treatment units like aerator of flash mixer, clarifloculator, plate and tube settler, pulsator clarifier, sand filter and disinfection units.
- Estimate the quantity of water softener & disinfectant and to incorporate suitable advanced treatment methods based on the water characteristics.
- Design service reservoirs, water distribution networks and be familiar with house service connection and pipe fittings & fixtures.

### SUGGESTED ACTIVITIES:

Problem solving sessions:

- Unit-1: Population forecasting problems
- Unit-2: Flow through pipes problems
- Unit-3: Problems on flash mixer, Clariflocculator and rapid sand filter
- Unit-4: Problems on demineralization

Unit-5: Service reservoir problems

### SUGGESTED EVALUATION METHODS:

Tutorial problems

Assignment problems

| CE23414     | HIGHWAY AND RAILWAY ENGINEERING | PC       | 3 | 0 | 0 | 3 |

| Obj | ecti | ves. |
|-----|------|------|
| ΟŊ  | uu   | vcs. |

- To analyze the development of highways in India and understand the fundamentals of highway classification, planning, and design.
- To design the various cross sectional elements of highway, including horizontal and vertical curves, and the application of IRC standards for pavement design.
- To impart knowledge on the best practices for construction and maintenance of highways, emphasizing material selection, testing methods, and drainage systems.
- To explore the elements of railway systems, focusing on track stress management, geometric design, and the integration of modern survey methods.
- To delve into railway construction methods, emphasizing earthwork, track stabilization, and tunneling, along with maintenance practices for longevity and efficiency.

### UNIT-I HIGHWAY ENGINEERING

History of road development in India – The role of highway transportation –Classification of highways Institutions for Highway planning, design and construction at different levels –master plan–20 year road development plan– principles of highway alignment – factors influencing highway alignment –Typical cross sections of Urban and Rural roads.

### UNIT-II DESIGN OF HIGHWAY ELEMENTS

Cross sectional elements – Horizontal curves, super elevation, transition curves, widening of curves – Sight distances – Vertical curves, gradients– pavement components and their role – Introduction to Design practice of flexible and rigid pavements (IRC methods only).

### UNIT-III HIGHWAY CONSTRUCTION AND MAINTENANCE

Highway construction materials, properties, testing methods – Construction practice of flexible and concrete pavement-Highway drainage–Evaluation and Maintenance of pavements.

### UNIT-IV RAILWAY PLANNING AND CONSTRUCTION

Elements of permanent way – Rails, Sleepers, Ballast, rail fixtures and fastenings, Selection of gauges - Track Stress, coning of wheels, creep in rails, defects in rails – Route alignment surveys, conventional and modern methods - Geometric design of railway, gradient, super elevation, widening of gauge on curves - Level Crossings.

### UNIT-V RAILWAY CONSTRUCTION AND MAINTENANCE

Earthwork – Stabilization of track on poor soil - Tunnelling Methods, drainage and ventilation – Calculation of Materials required for track laying - Construction and maintenance of tracks – Railway Station and yards and passenger amenities.

Total Contact Hours:45 PERIODS

8

10

10

8

### **Course Outcomes:**

On completion of the course students will be able to

- Comprehend the historical context, classify different types of highways, and identify the key institutions involved in highway planning and design.
- Design highway elements following safety and performance standards, using IRC methods for flexible and rigid pavements.
- Identify high quality construction materials and apply testing techniques to maintain best practices for construction and maintenance of highways, emphasizing on drainage systems.
- Design railway tracks considering operational stresses and safety regulations, and apply modern methods for route alignment.
- Construct and maintain railway infrastructure, ensuring operational efficiency and passenger safety through advanced construction and maintenance techniques.

### SUGGESTED ACTIVITIES (if any) (UNIT/ Module Wise) – Could suggest topic

Activity Based Learning - UNIT-1,2,3

Implementation of small module –UNIT-4,5

# **SUGGESTED EVALUATION METHODS (if Any)** (UNIT/ Module Wise) – could suggest topic Quizzes-UNIT-1,2,3,4,5

Class Presentation/Discussion-UNIT-1,2,3

| Cou | irse Outcomes:  |
|-----|---|
| On  | completion of the course, the students will be able to  |
| •   | Classify soils based on Indian Standard Classification System and analyze soil compaction behavior under different  |
|     | field conditions to optimize soil performance in engineering projects.  |
| •   | Evaluate the effective stress and permeability characteristics of soils through laboratory and field tests, and analyze seepage and flow conditions to address engineering challenges such as quicksand conditions and groundwater flow.  |
| •   | Analyze stress distribution in soils, assess settlement components, and apply consolidation theories to predict and   |
| •   | mitigate settlement in geotechnical engineering projects.   |
| •   | Determine the shear strength of cohesive and cohesionless soils using different laboratory tests and analyze the factors influencing shear behavior for practical applications in geotechnical design and construction.<br>Analyze the stability of infinite and finite slopes using methods such as Taylor's stability charts and Swedish Circle |
| •   | Method, determine critical slip surfaces, and recommend appropriate slope protection measures.  |

- To assess the mechanical properties of materials through experimental investigation.
- To gain knowledge of the calibration process for flow measurement apparatus and its applications.
- To analyze and interpret losses occurring in pipe flow systems.
- To learn the principles of pump and turbine operations and explore their real-time applications.
- To identify and evaluate the properties of open channel flow through experiments.

# Description of the Experiments Total Contact Hours: 60

- 1. Tension Test on Mild Steel Rod.
  - 2. Double Shear Test on Metal.
- 3. Torsion Test on Mild Steel Rod.
- 4. Impact Test on Metal Specimen (Izod and Charpy).
- 5. Hardness Test on Metals (Rockwell and Brinell Hardness Tests).
- 6. Deflection Test on Metal Beams Simply Supported Beam / Cantilever Beam.
- 7. Compression Test on Helical Spring
- 8. Tension Test on Helical Spring.
- 9. Bernoulli's Experiment.
- 10. Coefficient of Discharge of Orifice Meter / Venturi Meter.
- 11. Determination of Friction Loss in Pipes
- 12. Determination of Various Types of Minor Losses in Pipes
- 13. Characteristics of Centrifugal pumps / Reciprocating Pump.
- 14. Characteristics of Pelton wheel turbine.
- 15. Characteristics of Francis turbine / Kaplan turbine.
- 16. Open channel Flow

# **Course Outcomes:**

On completion of the course, the students will be able to

- Perform mechanical tests on materials, including tension, shear, torsion, impact, hardness, and deflection, to evaluate their properties and behavior.
- Analyze spring behavior under compression and tension through experimental testing.
- Determine fluid flow parameters using Bernoulli's experiment, orifice meters, and Venturi meters.
- Evaluate friction losses and minor losses in pipes to understand energy loss in fluid flow.
- Examine the performance characteristics of pumps, turbines, and open channel flow for hydraulic applications.

| The p<br>plays,<br>discus | program is con      | pletely st<br>s other ga | udent centric where the focus is on activities le<br>mes as well. These activities would be supplem  |   |  |  |  |  |  |
| Week                      | Activity            | Name                     | Description  | Objective   |  |  |  |  |  |
| 1                         | Introduction        | 1                        | The trainer and the college facilitator talk to<br>the students about the course and in turn the<br>students introduce themselves.   | To set expectations about the<br>course and the students are made<br>aware of the rules and regulations<br>involved in<br>this program  |  |  |  |  |  |
| 2                         | If I ruled the      | e world                  | This is a quick and useful game by getting<br>students to form a circle and provide their<br>point of view. Each student then repeats what<br>the other has said and comes up with their<br>own opinion.   | The aim of this activity is to for<br>students to get to know each other<br>and also develop their listening<br>skillsas well as learning how to<br>agree and disagree politely.  |  |  |  |  |  |
| 3                         | Picture Nar         | rating                   | This activity is based on several sequential<br>pictures. Students are asked to tell the story<br>taking place in the sequential pictures by<br>paying attention to the criteria provided by<br>the teacher as a rubric. Rubrics can include<br>the vocabulary or structures they need to use<br>while narrating.  | The aim of this activity is to make<br>the students develop creative way<br>of thinking.  |  |  |  |  |  |
| 4                         | Brainstormi         | ng                       | On a given topic, students can produce ideas<br>in a limited time. Depending on the context,<br>either individual or group brainstorming is<br>effective and learners generate ideas quickly<br>and freely. The good characteristics of<br>brainstorming are that the students are not<br>criticized for their ideas so students will be<br>open to sharing new ideas. | The activity aims at making the<br>students speak freely without the<br>fear of being criticized. It also<br>encourages students to come up<br>withtheir own opinions.  |  |  |  |  |  |
| 5                         | Debate              |                          | Is competition necessary in regards to the learning process?   | The aim of this activity is<br>develop the students ability<br>debate andthink out of the box   |  |  |  |  |  |
| 6                         | Short Talks         |                          | Here the students are given topics for which<br>they take one minute to prepare and two<br>minutes to speak. They can write down<br>points but can't read them out they can only<br>use it as a reference.   | The activity aims at breaking the<br>students" shyness and<br>encouraging them to standup ir<br>front of the class and speak. It also<br>aims at creating awareness that<br>they are restricted for time so they<br>only speak points that are relevant<br>and important. |  |  |  |  |  |
| 7                         | Debate              |                          | Will posting students" grades on bulletin<br>boards publicly motivate them to perform<br>better or is it humiliating?  | This activity aims at enhancing<br>the students unbiased though<br>process when it comes to exams<br>and grades<br>as well as develop their skills to<br>debate   |  |  |  |  |  |
| 8                         | The Ar<br>diplomacy | t of                     | The facilitator proceeds to share multiple<br>concepts of conversation and helps the<br>participants to identify the various methods of<br>being diplomatic and how do deal with<br>misinformation.  | The aim of the lesson is<br>provide an opportunity for the<br>participants to learn about boo   |  |  |  |  |  |

To understand the scope and methods of site investigation, soil exploration techniques, and sampling methods, and to interpret test results for selecting suitable foundations in geotechnical engineering projects.

- To comprehend the principles of shallow foundation design, evaluate bearing capacity and settlement characteristics, and apply Codal provisions and seismic considerations to ensure safe and effective foundation performance in various soil conditions.
- To understand the design principles and applications of various types of footings and raft foundations, including contact pressure distribution, rigid behavior, and Codal provisions, to ensure structural stability and performance.
- To study the types, functions, and design principles of pile foundations, including load-carrying capacity, group • behavior, uplift resistance, and settlement analysis, while adhering to Codal provisions.
- To understand the principles of earth pressure theories, evaluate the earth pressures acting on retaining structures • using analytical and graphical methods and to analyze the stability of retaining walls.

## **UNIT-I** SITE INVESTIGATION AND SELECTION OF FOUNDATION

Scope and objectives – Methods of exploration – boring - Depth and spacing of bore holes – Auguring, wash boring and rotary drilling — Soil samples – Representative and undisturbed – Sampling methods – Split spoon sampler, Thin wall sampler, Stationary piston sampler - Penetration tests - SPT and SCPT - Data interpretation - Bore log report and Selection of foundation.

## SHALLOW FOUNDATION UNIT-II

Depth of foundation - Bearing capacity of shallow foundation on homogeneous deposits - Terzaghi's formula and BIS formula - Codal provision - Factors affecting bearing capacity - plate load test - Allowable bearing pressure - Seismic considerations in bearing capacity evaluation. Determination of Settlement of foundations on granular and clay deposits - Total and differential settlement - Allowable settlement - Codal provision - Methods of minimizing total and differential settlements.

# UNIT-III FOOTINGS AND RAFTS

Types of Isolated footing, Combined footing, Mat foundation - Contact pressure distribution - Proportioning of foundations for conventional rigid behaviour - Minimum thickness for rigid behaviour - Applications - Compensated foundation - Codal provision.

## UNIT-IV PILE FOUNDATION

Types of piles and their functions – Factors influencing the selection of pile – Load carrying capacity of single pile in granular and cohesive soil - Static formula - Dynamic formulae (Engineering news and Hiley's) - insitu test - pile load test (routine test only) - Negative skin friction - Uplift capacity- Group capacity by different methods (Feld's rule, Converse – Labarra formula and block failure criterion) – Settlement of pile group – Under reamed piles – Codal provisions. 9

### UNIT-V **RETAINING WALLS**

Plastic equilibrium in soils - Active and passive states - Rankine's theory - Cohesionless and cohesive soil -Coulomb's wedge theory - Condition for critical failure plane - Earth pressure on retaining walls of simple configurations - Culmann's Graphical method - Stability analysis of retaining walls - Codal provisions.

Total Contact Hours: 45

# **Course Outcomes:**

On completion of the course, the students will be able to

- Perform site investigations, analyze soil exploration data including penetration tests, prepare bore log reports, and recommend appropriate foundation types based on subsurface conditions.
- Calculate the bearing capacity of shallow foundations using Terzaghi's and BIS formulas, assess total and • differential settlements, and recommend methods to minimize settlement in compliance with Codal provisions.
- Design isolated, combined, and mat foundations, evaluate contact pressure distribution, and apply Codal provisions to proportion foundations for rigid behavior and specific site conditions.
- Evaluate the load-carrying capacity of single and group piles, analyze settlement and uplift behavior, and design pile foundations using static and dynamic methods in compliance with Codal provisions.
- Calculate active and passive earth pressures using Rankine's and Coulomb's theories, apply Culmann's graphical • method and perform stability analysis of retaining walls.

- To calculate the quantity of sanitary sewage flow, storm water flow & to design the sewer.
- To design the primary treatment units and to know its construction, operation and maintenance aspects.
- To design the secondary treatment units and to know its construction, operation and maintenance aspects.
- To know disposal of sewage using various methods without affecting the environment.
- To design the sludge treatment units like digesters, thickeners and their ultimate disposal without affecting the environment.

# UNIT-I PLANNING AND DESIGN OF SEWERAGE SYSTEM

Characteristics and composition of sewage - population equivalent -Sanitary sewage flow estimation – Sewer materials – Hydraulics of flow in sanitary sewers – Sewer design – Storm drainage-Storm runoff estimation – sewer appurtenances – corrosion in sewers – prevention and control – sewage pumping-drainage in buildings-plumbing systems for drainage.

# UNIT-II PRIMARY TREATMENT OF SEWAGE

Objectives – Unit Operations and Processes – Selection of treatment processes - Onsite sanitation – Septic tank-Grey water harvesting – Primary treatment – Principles, functions and design of sewage treatment units - screens -grit chamber-primary sedimentation tanks – Construction, Operation and Maintenance aspects.

# UNIT-III SECONDARY TREATMENT OF SEWAGE

Objectives – Selection of Treatment Methods – Principles, Functions, - Activated Sludge Process and Extended aeration systems -Trickling filters– Sequencing Batch Reactor(SBR) – Waste Stabilization Ponds - Reclamation and Reuse of sewage – Recent Advances in Sewage Treatment – Construction, Operation and Maintenance aspects.

# UNIT-IV DISPOSAL OF SEWAGE

Standards for- Disposal - Methods - dilution - Mass balance principle - Self-purification of river- Oxygen sag curve - deoxygenation and reaeration - Streeter-Phelps model - Land disposal - Sewage farming - sodium hazards - Soil dispersion system.

# UNIT-V SLUDGE TREATMENT AND DISPOSAL

Objectives - Sludge characterization – Thickening - Design of gravity thickener- Sludge digestion - Standard rate and High rate digester design- Biogas recovery - Sludge Conditioning and Dewatering – Sludge drying beds – ultimate residue disposal - recent advances.

# **Total Contact Hours: 45**

9

# **Course Outcomes:**

On completion of the course, the students will be able to

- Estimate sanitary sewage flow, storm water flow & design the sewer and have acquired knowledge on sewer materials, sewer appurtenances, corrosion and its preventive measures.
- Design the primary treatment units and to manage its operation and maintenance.
- Design the secondary treatment units and to manage its operation and maintenance.
- Acquire knowledge on the disposal of sewage using various methods without affecting the environment.
- Design the sludge treatment units like digesters, thickeners and their ultimate disposal without affecting the environment.

# SUGGESTED ACTIVITIES (if any) (UNIT/ Module Wise) – Could suggest topic

- Problem solving sessions for unit 1, 2, 3, 5
- Oral Survey conducted in unit-1 and Unit-4 to test depth of knowledge gained in various topics.
- Activity Based Learning on treatment processes of Unit 2, 3

# SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) - could suggest topic

- Assignment in Unit 1, 2, 3, 4, 5
- Tutorial problems in relevant topics of Unit 1, 2, 3, 4, 5
- Spot class test conducted in Unit 1, 2, 3, 5 to assess knowledge gained by student
- Class Presentation/Discussion in Unit-4 and Unit-5

| CE23521     | WATER AND WASTE WATER ANALYSIS LABORATORY | PC       | 0 | 0 | 4 | 2 |

- To analyze the physical, chemical and biological characteristics of water and wastewater.
- To quantify the dosage requirement for coagulation process.
- To investigate the growth of micro-organism and its quantification
- To determine the mineral content in water.
- To decide the biological characteristics of water and wastewater.

## **Description of the Experiments**

- 1. Determination of pH, Turbidity and conductivity
- 2. Determination of Hardness.
- 3. Determination of Alkalinity and Acidity.
- 4. Determination of Chlorides
- 5. Determination of Phosphates and Sulphates.
- 6. Determination of Iron and fluoride.
  - 7. Determination of residual chlorine and available chlorine in bleaching powder
- 8. Determination of Oil and Grease.
- 9. Determination of Suspended, settleable, volatile and fixed solids.
- 10. Determination Dissolved Oxygen and BOD for the given sample.
- 11. Determination of Optimum Coagulant dosage
- 12. Determination of COD for given sample.
  - 13. Determination of SVI of Biological sludge and microscopic examination.
  - 14. Determination of MPN index of given water sample.

# **Course Outcomes:**

On completion of the course, the students will be able to

- Conduct tests to determine physical and chemical properties such as pH, turbidity, and conductivity of water samples.
- Analyze and quantify water hardness, alkalinity, acidity, and chlorides using standard laboratory techniques.
- Evaluate water pollution indicators by determining BOD, COD, dissolved oxygen, and other relevant tests.
- Apply modern analytical tools to assess environmental samples and provide data-driven recommendations for treatment processes.
- Demonstrate the ability to compile and present water quality reports with adherence to professional and ethical standards.

| CE23522     | SURVEY CAMP*                    | PC       | 0 | 0     | 2 | 1 |

- To develop proficiency in using Total Station for traversing and to understand contouring methods for representing topographical features.
- To gain skills in levelling techniques for road and canal projects and learn to offset and plot building locations with precision.
- To understand astronomical observations for calculating sunrise and sunset times and determine azimuths using ex-meridian observations.
- To acquire skills in GPS-based traversing and to lay out curves on roads or railways using the deflection angle method.
- To learn and apply the principles of triangulation and trilateration for establishing control points and mapping areas.

# Description of the Experiments Total Contact Hours:15 1. Traversing using Total Station. 2. Contouring – Radial and Block. 3. Longitudinal and Cross Sectional Levelling of Road /Canal. 4. Offset of Buildings and Plotting the Location. 5. Estimation of Sun Rise/ Sun Set time using Sun Observations. 6. Determination of Azimuth by Ex Maridian observation

- 6. Determination of Azimuth by Ex-Meridian observation.
- 7. Traversing using GPS.
- 8. Curve setting by deflection angle method.
- 9. Triangulation.
  - 10. Trilateration.

# **Course Outcomes:**

On Completion of the course, the students will be able to

- Perform accurate traversing with a Total Station and generate contour maps using radial and block methods for land surveys.
- Execute longitudinal and cross-sectional levelling and accurately offset and map the location of buildings on site plans.
- Estimate sunrise/sunset timings and determine azimuth angles for navigation and surveying applications.
- Proficient in using GPS for accurate traversing and curve setting for infrastructure projects.
- Identify positions and create maps using triangulation and trilateration methods effectively.

(\* Two weeks at the end of Semester IV)

# SUGGESTED EVALUATION METHODS

- Experiment based viva voce
- Quizzes

# **Course Objectives:**

The major course objectives are:

- 1. To help students break out of shyness.
- 2. To build confidence.
- 3. To enhance English communication skills.
- 4. To encourage students' creative thinking to help them frame their own opinions,

# Learning and Teaching Strategy:

The program is completely student centric where the focus is on activities led by students which include role plays,

discussions, debates other games as well. These activities would be supplemented by interactive use of technology and

brief trainer input.

| Week | Activity Name        | Description   | Objective   |
|------|----------------------|---|---|
| 1    | The News hour        | Students are made to read news articles from the<br>English newspapers. The students also have to find<br>words and their meaning from the article they have not<br>come across before and share it with the group. They<br>then use these words in sentences of their own  | The aim of this activity is not only to<br>get the students to read the newspaper<br>but also aims at enhancing the<br>students' vocabulary.  |
| 2    | Court Case           | The facilitator provides the participants the premise of<br>a story and proceeds to convert the story into a court<br>case. The students are required, department-wise to<br>debate and provide their points to win the case for their<br>clients.  | The aim of the lesson is to encourage creative and out-of-the -box thinking to ensure a good debate and defense skills.   |
| 3    | The ultimate weekend | The students design activities they are going to do<br>over the weekend and they have to invite their<br>classmates to join in the activity. The students move<br>around the class and talk to other students and invite<br>them.   | The aim of this activity is to develop<br>the art of conversation among students.<br>It also aims at practicing the<br>grammatical structures of "going to"<br>"have to" and asking questions.              |
| 4    | The Four Corners     | This is a debate game that uses four corners of the classroom to get students moving. The following is written on the 4 corners of the room "Strongly Agree, Somewhat Agree, Somewhat Disagree and Strongly Disagree". The topics are then given to the class and students move to the corner that they feel best explains their opinions | This activity aims at getting students to<br>come up with their own opinions and<br>stand by it instead of being<br>overshadowed by others and forcing<br>themselves to change based on others<br>opinions. |
| 5    | Debate               | Boarding school or day school? Which is more beneficial for a student?  | The aim of this activity is to encourage<br>students to draw up feasible points on<br>the advantages and benefits of both.<br>And enhance their debating ability  |
| 6    | Grand Master         | The facilitator starts the session by keeping an<br>individual in mind, upon which the students guess it<br>only through "Yes or No" questions. Post few trials<br>the students are given same opportunity to do the same<br>with the crowd.  | The aim of the lesson is designed to<br>teach the art of questioning. It also<br>helps to enhance the students' speaking<br>and listening skills.   |
| 7    | Debate               | Does violence on the TV and Video games influence children negatively?  | This activity aims at encouraging the<br>students to debate on real life scenarios<br>that most students spend a lot of time<br>on.   |
| 8    | Turn Tables          | This is a speaking activity where the students need to<br>speak for and against the given topics when the<br>facilitator shouts out 'Turn Table'.   | The aim of this activity is to make the<br>participants become spontaneous and<br>have good presence of mind.   |
| 9    | Debate               | Do marks define the capabilities of a student?  | This debate activity aims at allowing<br>the students to argue on this worrisome<br>adage of marks.   |

| 10 | FictionAD   | The Participants are asked to create an Ad for a challenging topic only using fictional characters.  | The activity aims at developing their creativity and presentation skills.  |
|----|-------------|--|--|
| 11 | Debate      | Are social networking sites effective, or are they just<br>a sophisticated means for stalking people?                                      | This activity aims at refining the<br>students debating skills on a very real<br>life situation  |
| 12 | Talent Hunt | Talent Hunt is a fun activity where the students are<br>selected at random and supported to present any of<br>their own skills.            | The aim of this activity is designed to<br>evoke their inner talents and break the<br>shyness and the fear of participating in<br>front of a crowd |
|    | Feedback    | At the end of the session in the final week (12) the trainer would provide feedback to the students on best practices for future benefits. | The aim is to do both give feedback to<br>students as well as obtain feedback on<br>the course from them.  |

# **Course Learning Outcome:**

On successful completion of the course, students should be able to:

- 1. Be more confident
- 2. Speak in front of a large audience without hesitation
- 3. Think creatively
- 4. Speak impromptu
- 5. Communicate in English

- To provide foundational knowledge in construction planning, including technology selection, work task definition, job layout, work breakdown structure and resource and duration estimation.
- To impart knowledge on construction scheduling techniques, including bar charts, CPM, PERT, resourceoriented scheduling, and advanced methods for managing constraints, uncertainties, and time-cost tradeoffs.
- To acquaint the principles of cost control, budgeting, forecasting, cash flow management, and integrating cost and schedule information for effective project management.
- To provide an understanding of safety management in construction, including safety programs, jobsite assessments, accident analysis, and quality control methods, along with ISO standards and statistical techniques for quality assurance.
- To introduce various types of construction organizations, project information management, and the use of computerized systems, databases, and information flow for effective construction project management.

# UNIT-I CONSTRUCTION PLANNING

Basic concepts in the development of construction plans - Choice of Technology and Construction method - Defining Work Tasks – Job layout - Work breakdown structure - Precedence relationships among activities - Estimating Activity Durations - Estimating Resource Requirements for work activities.

# UNIT-II SCHEDULING PROCEDURES AND TECHNIQUES

Relevance of construction schedules - Bar charts – CPM – PERT - Resource oriented scheduling - Scheduling with resource constraints and precedence - Use of Advanced Scheduling Techniques - Scheduling with uncertain durations - Crashing and time/cost tradeoffs - Improving the Scheduling process – Introduction to application software (Primavera and MS Project).

# UNIT-III | COST CONTROL MONITORING

Introduction to Cost Control - The cost control problem - The project budget - Control of project cash flows - Schedule control - Schedule and Budget updates - Relating cost and schedule information.

# UNIT-IV SAFETY AND QUALITY IN CONSTRUCTION

Importance of safety - Elements of safety programme - Jobsite safety assessment - Site accidents - Causes - Classification - Approaches to improve safety - Safety codes and OSHA standards - Quality control in construction- Importance - Elements - Quality control methods - ISO 9000 family of standards - Statistical methods - Sampling by attributes - Sampling by variables - Techniques of QC.

# UNIT-V ORGANIZATION AND USE OF PROJECT INFORMATION

Types of Construction Organization - Types of project information - Accuracy and Use of Information - Computerized organization and use of Information - Organizing information in databases - relational model of Data bases – Other conceptual Models of Databases - Centralized database Management systems - Databases and application programs - Information transfer and Flow.

# **Total Contact Hours: 45**

9

0

# **Course Outcomes:**

On completion of the course, the students will be able to

- Develop comprehensive construction plans with defined tasks, optimized layouts, and accurate resource and time estimates for effective project management.
- Develop and optimize construction schedules using advanced techniques, address resource constraints and uncertainties, and apply strategies like crashing to enhance project efficiency.
- Manage project budgets, control costs, forecast expenditures, update schedules, and relate cost and schedule data to ensure financial and timeline adherence in projects.
- Implement safety programs, assess risks, apply quality control methods and use statistical techniques to ensure construction site safety and meet ISO 9000 standards for quality management.
- Organize and manage construction project information using relational database models, understand database management systems, and efficiently transfer and flow information for project success.

| CE23613     | STRUCTURAL DYNAMICS AND EARTHQUAKE | РС       | 3 | 0 | 0 | 3 |
|             | ENGINEERING                        |          |   |   |   |   |

- To understand the concept of formulation of equations of motion of SDOF system for free and forced • vibration of damped and undamped structures.
- To gain knowledge about basic principles of free and forced vibration both undamped and damped multiple • degree of freedom systems.
- To get familiarized with the elements of engineering seismology.
- To acquire knowledge on the performance of structures under earthquake loading and evaluate earthquake • forces as per IS: 1893-2016.
- To recognize the principles of Earthquake Resistant Design and detailing as per IS: 13920-2016. •

### UNIT-I SINGLE DEGREE OF FREEDOM SYSTEM

Definition of degree of freedom - Idealization of structure as Single Degree of Freedom (SDOF) system -Formulation of equation of motion for various SDOF system - D' Alembert's Principles - Effect of damping - Free and forced vibration of damped and undamped structures (Basics Only) 0

## MULTI DEGREE OF FREEDOM SYSTEM UNIT-II

Formulation of the equation of motion for multi-degree of freedom (MDOF) system - Evaluation of natural frequencies and modes - Eigen values and Eigen vectors - Response to free and forced vibration of undamped and damped MDOF systems - Modal superposition methods.

# UNIT-III INTRODUCTION TO EARTHQUAKE ENGINEERING

Elements of Engineering Seismology - Definitions, Introduction to Seismic hazard, Earthquake phenomenon -Seismotectonics – Seismic Instruments – Characteristics of Strong Earthquake motion – Estimation of Earthquake Parameters.

# UNIT-IV EARTHQUAKE EFFECTS ON STRUCTURES

Effect of earthquake on different types of structures - Behaviour of RCC, Steel and prestressed Concrete Structures under earthquake loading – Pinching Effect – Bouchinger Effects – Evaluation of Earthquake forces – IS Code 1893: 2002 - Response Spectra - Lessons learnt from past earthquakes.

## UNIT-V CONCEPTS OF EARTHQUAKE RESISTANT DESIGN

Causes of damage - Planning considerations/Architectural concept (IS 4326-2013) - Guidelines for Earthquake resistant design – Earthquake resistant design of masonry buildings– Design consideration – Guidelines – Earthquake resistant design of R.C.C. buildings - Lateral load analysis - Design and detailing (IS 13920:2016).

**Total Contact Hours:45** 

9

# **Course Outcomes:**

On completion of the course, the students will be able to

- Apply the concept of static and dynamic analysis of structures on SDOF systems.
- Analyze the modes of multi- degree of freedom systems. •
- Understand the concepts of engineering seismology and estimate earthquake parameters. •
- Evaluate seismic forces for various structures as per Indian Codal provision. •
- Plan and design an Earthquake resistant masonry & amp; RCC structure as per Indian Code guidelines. •

# SUGGESTED ACTIVITIES

- Problem solving sessions
- Flipped classroom Comparing SOA with Client-Server and Distributed architectures
- Survey on various storage technologies
- Activity Based Learning

SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) - could suggest topic

- Tutorial problems
- Assignment problems
- Ouizzes
- Class Presentation/Discussion

# **Course Objectives:**

- To improve the numerical ability.
- To improve problem-solving skills.

# **Course topics:**

| S.No. | Topics   |
|-------|--|
| 1     | Numbers system   |
| 2     | Reading comprehension  |
| 3     | Data arrangements and Blood relations                                |
| 4     | Time and Work  |
| 5     | Sentence correction  |
| 6     | Coding & Decoding, Series, Analogy, Odd man out and Visual reasoning |
| 7     | Percentages, Simple interest and Compound interest                   |
| 8     | Sentence completion and Para-jumbles                                 |
| 9     | Profit and Loss, Partnerships and Averages                           |
| 10    | Permutation, Combination and Probability                             |
| 11    | Data interpretation and Data sufficiency                             |
| 12    | Logarithms, Progressions, Geometry and Quadratic equations.          |
| 13    | Time, Speed and Distance   |

**Course Outcome:** On successful completion of the course, students should be able to:

- Have mental alertness.
- Have numerical ability.
- Solve quantitative aptitude problems with more confident

| Course Code | Course Title (Lab Oriented Course) | Category | L | Т | Р | С |
|-------------|------------------------------------|----------|---|---|---|---|
| GE23627     | DESIGN THINKING AND INNOVATION     | EEC      | 0 | 0 | 4 | 2 |
|             | (TYPE - PROJECT BASED LEARNING)    |          |   |   |   |   |

- To understand the design thinking concepts and deep understanding of user needs and experiences.
- To find the problem statement and To develop innovative design solutions that address identified user challenges
- To master the process of prototyping and iterating on designs.
- To conduct thorough market analysis and financial planning
- To effectively communicate design concepts and findings.

# **Unit-I: Introduction to Design Thinking:** The design thinking concepts - Different design thinking models - Details of Stanford Design thinking process: Empathize, Define, Ideate, Prototype, Test

# Activities:

- Case studies of successful domain based Design Thinking and Innovative projects
- Group discussions on design thinking

**Unit 2: Empathize and Define:** User research methods (interviews, surveys, observation, contextual inquiry) - Persona development- Journey mapping – Brainstorming Defining the design problem statement

# Activities:

- Conducting user interviews and surveys
- Creating user personas and journey maps
- Identifying key user needs and pain points
- Analyze the user needs and Brainstorming to define problem statement

**Unit 3: Ideate and Create:** Brainstorming techniques (e.g., mind mapping, SCAMPER) - Ideation tools (e.g., design thinking tools, concept sketching) - Concept generation and evaluation (e.g. Brainstorming)

# Activities:

- Group brainstorming sessions to select the best idea
- Creating concept sketches and prototypes
- Evaluating ideas based on user needs and feasibility

Unit 4: Prototype and Test: Low, Medium and high level fidelity for prototyping-Usability testing -Iterative design Activities:

- Building low-fidelity prototypes (e.g., paper prototypes)
- Conducting usability tests with users
- Iterating on designs based on feedback

Unit 5: Market Analysis and Implementation: Market research and analysis - Business model development-

# Financial planning-Implementation strategies

Activities:

- Conducting market research
- Developing a business model canvas
- Creating a financial projection
- Developing an implementation plan

# **Course Outcomes:** On completion of the course, the students will be able to

| CO1 | Construct design challenge and reframe the design challenge into design opportunity.  |
|-----|---|
| CO2 | Interview the user, and know the feelings of users to foster deep user understanding and be able to uncover the deep user insights and needs. |
| CO3 | Develop ideas and prototypes by brainstorming.  |
| CO4 | Organize the user walkthrough experience to test prototype  |
| CO5 | Develop smart strategies and implementation plan that will deliver/achieve the idea/solution deduced from earlier phases.                     |
|     |   |

# Assessment:

- Encourage students to work on real-world design challenges based on the user needs
- Group presentations
- Quizzes and exams
- Evaluation of Project report and viva and also encourage the students for filing patent/ copyright / presenting in conference / publishing in journal

# SEMESTER VII

| Course Code | Course Title (Theory course)                  | Category | L | Т | Р | C |
|-------------|---|----------|---|---|---|---|
| CE23711     | ESTIMATION, COSTING AND VALUATION ENGINEERING | PC       | 3 | 0 | 0 | 3 |

# **Objectives:**

- To understand the philosophy, purpose, and methods of quantity estimation for various construction elements and infrastructure works.
- To learn the principles of rate analysis and costing for construction works by incorporating standard data, market rates, and schedule of rates.
- To familiarize students with detailed specifications, tendering processes, and preparation of project reports for construction activities.
- To gain knowledge about various types of construction contracts, their formation, conditions, and resolution of disputes in compliance with standard practices.
- To develop an understanding of valuation concepts, methods, and their applications in real estate and infrastructure projects.

# UNIT-I QUANTITY ESTIMATION

Philosophy – Purpose – Methods of estimation – Types of estimates – Approximate estimates – Detailed estimate – Estimation of quantities for buildings, bituminous and cement concrete roads, septic tank, soak pit, retaining walls – culverts (additional practice in class room using computer softwares).

# UNIT-II RATE ANALYSIS AND COSTING

Standard Data – Observed Data – Schedule of rates – Market rates – Rate Analysis for all Building works, canals, and Roads – Cost Estimates (Excel based preparation for estimation) - (Analysis of rates for the item of work asked, the data regarding labour, rates of labour and rates of material to be given in the Examination QuestionPaper).

# UNIT-III SPECIFICATIONS, REPORTS AND TENDERS

Specifications – Detailed and general specifications (NRM 2) – Principles for report preparation – report on estimate of residential building – Culvert – Roads – TTT Act 2000 – Tender notices – types – tender procedures – Drafting model tenders, E-tendering-Digitalsignature certificates - Encrypting – Decrypting – Reverse auctions.

# UNIT-IV CONTRACTS

Contract – Types of contracts – Formation of contract – Contract conditions – Contract for labour, material,design, construction – Drafting of contract documents based on IBRD / MoRTH Standard bidding documents – Construction contracts – Contract problems – Arbitration and legal requirements - Construction disputes and resolution methods (FIDIC contract terms).

# UNIT-V VALUATION

Definitions – Various types of valuations – Valuation methods - Necessity – Capitalised value – Depreciation – Escalation – Valuation of land – Buildings – Calculation of Standard rent – Mortgage – Lease.

Total Contact Hours: 45

11

9

0

9

# **Course Outcomes:**

On completion of the course, the students will be able to

- Calculate the quantities for buildings, roads, septic tanks, soak pits, retaining walls, and culverts using both manual methods and computer software.
- Perform rate analysis and prepare cost estimates for buildings, canals, and roads with detailed calculations for labor, materials, and other resources.
- Capable of drafting project reports, model tenders, and understanding tender procedures, including E-tendering and digital encryption methods.
- Acquire skills in drafting and managing construction contracts while addressing legal requirements and dispute resolution using FIDIC terms.
- Conduct valuations for land and buildings, calculate depreciation, and assess capitalized value, standard rent, and other financial aspects related to real estate.

# SUGGESTED ACTIVITIES

- Problem solving sessions
- Case Studies
- Flipped Classrooms

# SUGGESTED EVALUATION METHODS

- Assignment problems
- Quizzes
- Class Presentation/Discussion

|-------------|------------------------------|----------|---|---|---|---|
| CE23712     | HYDROLOGY                    | PC       | 3 | 0 | 0 | 3 |

To gain foundational knowledge of precipitation and associated losses. •

- To develop skills in constructing hydrographs. •
- To explore the impact and concept of floods and flood routing. •
- To acquire insights into storage estimation and life of reservoirs. .
- To develop knowledge of subsurface water hydrology and management.

#### UNIT-I PRECIPITATION AND ABSTRACTIONS

Hydrological cycle- Meteorological measurements - Requirements, types and forms of precipitation - Rain gauges -Spatial analysis of rainfall data using Thiessen and Isohyetal Methods-Interception - Evaporation. Horton's equation, pan evaporation measurements and evaporation suppression - Infiltration-Horton's equation - double ring infiltrometer, infiltration indices.

## UNIT-II RUNOFF

Watershed, catchment and basin - Catchment characteristics - factors affecting runoff - Run off estimation using empirical - Strange's table and SCS methods - Stage discharge relationships- flow measurements- Hydrograph - Unit Hydrograph - IUH.

# UNIT-III FLOOD AND DROUGHT

Natural Disasters-Flood Estimation- Frequency analysis- Flood control- Definitions of droughts-Meteorological, hydrological and agricultural droughts- IMD method-NDVI analysis Drought Prone Area Program (DPAP). RESERVOIRS 8

# UNIT-IV

Classification of reservoirs, General principles of design, site selection, spillways, elevation - area - capacity - storage estimation, sedimentation - life of reservoirs - rule curve.

## **GROUNDWATER AND MANAGEMENT UNIT-V**

Origin- Classification and types - properties of aquifers- governing equations - steady and unsteady flow - artificial recharge - RWH in rural and urban areas.

# **Total Contact Hours: 45**

10

8

9

10

# **Course Outcomes:**

On completion of the course, the students will be able to

- Analyze precipitation and abstraction processes using advanced meteorological methods, spatial rainfall analysis, and empirical equations to evaluate hydrological drivers in catchments.
- Analyze catchment characteristics and factors influencing runoff, estimate runoff using empirical methods, and • interpret stage-discharge relationships and hydrographs, including unit hydrographs and IUH.
- Examine floods, droughts, and their management strategies. •
- Comprehend the design principles of Reservoirs, storage estimation, sedimentation management, reservoir life • and rule curve development.
- Analyze aquifer properties and flow dynamics, apply governing equations for groundwater movement, and evaluate artificial recharge and RWH strategies for sustainable resource management.

# SUGGESTED ACTIVITIES (if any) (UNIT/ Module Wise) - Could suggest topic

- Problem solving sessions Runoff Estimation, Flood frequency Analysis
- Activity Based Learning Hydrological cycle and Reservoir

# SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) - could suggest topic

- Tutorial problems
- Assignment problems
- Quizzes
- Class Presentation/Discussion

#### **Objectives:**

- To gain the concepts of BIM
- To introduce software tools available for 2D and 3D drawing.
- To introduce the students to draft the 3D plan, elevation and sectional views of buildings
- To acquire knowledge on building documentation and quantity take off as per National Building Code.
- To acquire knowledge in schedule for a multi storied building

|   | Description of the Experiments | <b>Total Contact Hours:60</b> |
|---|--------------------------------|-------------------------------|
| ſ | 1. Introduction to BIM         |                               |

- 2. Introduction to software tools available for 2D and 3D Exercises
- 3. Building Components Walls, Doors, Windows and Roofs
- 4. Building Components Floors, Staircase and Ramp
- 5. 3-D elevation for single storied building (output with Plan, Section and elevation rendering)
  - 6. 3-D elevation for multi storied building (output with Plan, Section and elevation rendering)
- 7. Interior design for rooms with lighting effect
- 8. Building walk through model.
- 9. Single storied building documentation and quantity take off
- 10. Multi storied building documentation and quantity take off
- 11. Construction schedule for a multi storied building

## **Course Outcomes:**

On completion of the course, the students will be able to

- Understand the role and potential of BIM for the industry.
- Classify software tools available for 2D and 3D drawing.
- Develop skills to draft the 3D plan, elevation and sectional views of buildings
- Recognize the need of building documentation and quantity take off as per National Building Code.
- Develop skills in schedule for a multi storied building

## SUGGESTED EVALUATION METHODS (if Any) (UNIT/ Module Wise) - could suggest topic

- Experiment based viva
- Quizzes
- Mini Project

#### **Objectives:**

• To solve the problems of various domains of Civil Engineering through artificial intelligence and machine learning.

#### **Description of the Project**

A student group of 2 members works on a domain-specific topic under the guidance of a faculty member and prepares a report after completing the work to the satisfaction. The student will be evaluated based on internal reviews, report preparation and the viva voce examination.

#### **Course Outcomes:**

• Solve the problems of various domains of Civil Engineering through artificial intelligence and machine learning.

4. The Complete Technology Book on E-Waste Recycling (Printed Circuit Board, LCD, Cell Phone, Battery, Computers) by NPCS Board of Consultants & Engineers, National Institute of Industrial Research (NIIR), 2015

# SUGGESTED ACTIVITIES

- Problem solving sessions on analysis of waste collection systems Unit 3
- Oral Survey conducted to test depth of knowledge gained in various topics, techniques and processes in Unit 1, 2, 4 and 5 by the student.
- Activity Based Learning Each student given a waste collection (or) waste processing method to give a presentation in Unit 3 & 4

# SUGGESTED EVALUATION METHODS

- Assignment in all units
- Tutorial problems in Unit-3
- Spot class test conducted in Unit 1, 2 and 5 to assess knowledge gained by student
- Class Presentation/Discussion in Unit-3 and Unit-4

| CE23B14   | SOLID AND HAZARDOUS WASTE MANAGEMENT   | PE   | 3  | 0  | 0 3  |  |  |  |  |  |
| <b>Objectives:</b>  |  |  |  |  |  |  |  |  |  |  |
|   | uate sources, classification, and regulatory frameworks for solid and hazard   |  |  |  |  |  |  |  |  |  |
|   | ire a comprehensive understanding on waste characterization and source re-   | eduction of sol  | d v  | vast   | e and  |  |  |  |  |  |
|   | us waste.  |  |  |  |  |  |  |  |  |  |
|   | and optimize systems for storage, collection, and transport of municipal an  |  |  |  |  |  |  |  |  |  |
|   | erstand and analyze suitable waste processing technologies for solid and h   | azardous wast  | e al   | ong  | with   |  |  |  |  |  |
|   | tment of biomedical wastes.  |  |  |  |  |  |  |  |  |  |
|   | se suitable disposal method for solid waste and hazardous waste.   |  |  |  | 0  |  |  |  |  |  |
|   | URCES, CLASSIFICATION AND REGULATORY FRAMEWORK<br>es of solid and hazardous wastes - Need for solid and hazardous waste mana   | accompant Cal  |  | + for  | 9  |  |  |  |  |  |
|   | tions on management and handling of municipal solid wastes, hazardous  |  |  |  |  |  |  |  |  |  |
|   | - lead acid batteries, electronic wastes, plastics and fly ash — Elem  |  |  |  |  |  |  |  |  |  |
|   | d roles of stakeholders - Financing and Public Private Participation for w   |  |  |  | vaste  |  |  |  |  |  |
|   | ASTE CHARACTERIZATION AND SOURCE REDUCTION   | uste munugen   |  |  | 9  |  |  |  |  |  |
|   | n rates and variation - Composition, physical, chemical and biological pr  | operties of sol  | id v   | was  |  |  |  |  |  |  |
|   | acteristics – TCLP tests – waste sampling and characterization plan -Sou   |  |  |  |  |  |  |  |  |  |
|   | - Extended producer responsibility - Recycling and reuse.  |  |  |  |  |  |  |  |  |  |
|   | ORAGE, COLLECTION AND TRANSPORT OF WASTES  |  |  |  | 9  |  |  |  |  |  |
| U   | egregation of wastes at source - storage and collection of municipal so  |  |  |  |  |  |  |  |  |  |
|   | ms - Need for transfer and transport - Transfer stations Optimizing waste  |  | mp   | atib   | oility,  |  |  |  |  |  |
|   | g and handling of hazardous wastes - hazardous waste manifests and tra   | ansport.   |  |  |  |  |  |  |  |  |
|   | ASTE PROCESSING TECHNOLOGIES   |  |  | _  | 9  |  |  |  |  |  |
|   | vaste processing – material separation and processing technologies -   |  |  |  |  |  |  |  |  |  |
|   | nologies – methods and controls of Composting - thermal conversion   |  |  |  |  |  |  |  |  |  |
| •   | eration – solidification and stabilization of hazardous wastes - treatment of  |  |  |  |  |  |  |  |  |  |
|   | the context of operation of facilities, handling of materials and impact of o  | outputs on the e   | nvı  | ron  |  |  |  |  |  |  |
|   | ASTE DISPOSAL<br>options – Disposal in landfills - Landfill Classification, types and metho  | 1 . 1  |  |  | 9  |  |  |  |  |  |

|--|------------|
| To understand foundation functions, types, selection criteria, and factors influencing pile choices.     To learn pile load capacity, behavior, and settlement in soils and rocks using static methods and API guidelines.     To assess pile load capacity, driving processes, stresses, and field measurements using formulas and wave equation analysis.     To study the behavior, capacity, and settlement of pile groups and pile-raft foundations, cc spacing, arrangement, and installation effects.     To familiarize the calculation of lateral and uplift resistance of piles using IS 2911, Broms y curves, and field testing.     UNIT-I DEEP FOUNDATIONS & TYPES     Functions and requisites of a foundation - Different types - Choice of foundation type – Types of deep for Types of pile foundations - Bactor governing choice of type of pile – different materials of pile - choice of pile Conductions and requisites of a foundation - Different types - Choice of foundation of pile - choice of pile Conductions and requisites of a foundation - Different types - Choice of foundation of pile - choice of pile Conductions and requisites of a foundation - Different types - Choice of induction is pile - choice of pile Conductions and requisites of a foundation - Different types - Fold method - API method - Piles in acycer dochesive and cohesion less soils – Settlement of single pile - Piles bearier in Context of piles by static formulae - Introduction - Stetement of single pile - Piles bearier Constraing capacity of piles by dynamic formulae: Introduction - Pile driving formulae - selection of pile formation of temporary elastic compression - Driving stresses in piles - Field measurement - Wav analysis. | CE23D12  | GROUND IMPROVEMENT TECHNIQUES PE  | 3        | 0        | 0    |
| Objectives:  |   | 1        |          |      |
|  | erstand the behavior of problematic soils and apply appropriate ground improveme  | nt tech  | inique   | es t |
|  | geotechnical challenges in foundation engineering.  |          |          |      |
|  | erstand dewatering techniques and seepage analysis for designing solutions to control   | groun    | idwat    | er i |
|  | nical engineering applications.   |          |          |      |
|  | y in-situ compaction and densification techniques for cohesionless and cohesive soils,  | along    | with     | the  |
|  | tions, installation methods, and limitations.   |          |          |      |
| • To und   | erstand the concepts, mechanisms, and applications of earth reinforcement and the fu  | nction   | al role  | es c |
| geotext  | iles in geotechnical engineering.   |          |          |      |
| • To stud  | dy various grouting techniques, materials, and their applications for soil stabiliz   | ation,   | inclu    | din  |
| equipm   | ent, injection methods, and monitoring processes.   |          |          |      |
| UNIT-I PR  | ROBLEMATIC SOIL AND IMPROVEMENT TECHNIQUES  |          |          | 9    |
| Role of ground i   | mprovement in foundation engineering - Methods of ground improvement - Geotechr   | nical pr | obler    | ns i |
|  | and black cotton soils - Selection of suitable ground improvement techniques based or   | 1 soil c | ondit    | ion  |
|  | EWATERING   |          |          | 9    |
|  | hniques - Well points - Vacuum and electroosmotic methods - Seepage analysis for  | two di   | mensi    | iona |
|  | nd partially penetrated slots in homogeneous deposits – Design for simple cases.  |          | <u> </u> |      |
|  | SITU COMPACTION TREATMENT OF COHESIONLESS AND COHESIVE S  |          |          | 9    |
|  | on of cohesionless soils – Shallow and deep compaction – Dynamic compaction – Vib   |          |          |      |
|  | s and deep compaction. Consolidation of cohesive soils – Preloading with sand drains a soft clay ground using stone columns and Lime piles - Installation techniques – Relative |          |          |      |
| methods and the  |   |          | s of a   | 001  |
|  | ARTH REINFORCEMENT  |          | <u> </u> | 9    |
|  | Forcement – Types of reinforcement material – Reinforced earth wall – Mechanism –   | Appli    | catio    |      |
|  | Functions of Geotextiles in filtration, drainage, separation, road works and containme  |          |          |      |
|  | ROUTING TECHNIQUES  |          |          | 9    |
|  | - Grouting equipment and machinery - Injection methods - Grout monitoring - S   | tabiliz  | ation    | wit  |
|  | l chemicals – Stabilization of expansive soil.  |          |          |      |

|--|--|--|---|---|
|  | TRAFFIC ENGINEERING AND MANAGEMENT   | PE   | 3 (   | ) 0 (   |
| Objectives:  |  |  |   |   |
| Provide  | a comprehensive understanding of traffic engineering, including  | the significar   | nce o   | f road  |
| characte   | vristics, vehicle and user behavior, and the fundamentals of traffic systems.  |  |   |   |
| • Equip s  | udents with the ability to conduct and analyze traffic surveys, including volu   | ume, capacity,   | speed   | , delay   |
|  | estrian studies, to assess the effectiveness of traffic systems and safety mea   |  | 1   |   |
|  | various traffic control methods, such as traffic signs, signals, road marking  |  | coordi  | ination   |
| -  | zing their application to improve traffic flow and safety.   | <i>,                                    </i>   |   |   |
| -  | e students to the principles of intersection design, including channelizatio   | n. rotary desig  | n. and  | d grade   |
|  | on concepts, with a focus on safety and efficiency.  | ,,   | , ,   | 0   |
| -  | he application of advanced traffic management techniques, including Tr   | affic System   | Mana  | gemen   |
|  | Travel Demand Management (TDM), and Intelligent Transport Systems (I'  | -  |   | -   |
|  | ice congestion.  |  | e trarr                                       | 10 110 1  |
|  | TRODUCTION   |  |   | 9   |
|  | scope, Characteristics of Vehicles and Road Users, Skid Resistance   | and Braking  | Eff   |   |
| -  | ponents of Traffic Engineering- Road, Traffic and Land Use Characteristic  | -  | ,- L11  | iciciie.  |
|  | AFFIC SURVEYS AND ANALYSIS   | ·3•  |   | 9   |
|  |  | aulaina Dadaat   |   |   |
| •  | alysis - Volume, Capacity, Speed and Delays, Origin and Destination, P   | arking, Pedest   | rian s  | studies   |
|  | and Safety Level of Services- Problems.  |  |   | 0   |
|  | TRAFFIC CONTROL  |  | . 1   | 9   |
| -  | ad markings, Design of Traffic signals and Signal co-ordination (Problem   | s), Traffic con  | trol a  | ids and   |
|  | Street Lighting, Computer applications in Signal design.   |  |   | -   |
|  | EOMETRIC DESIGN OF INTERSECTIONS   |  |   | 9   |
|  | rsections, Classification of Intersections at Grade, - Channelized and Un  |  |   |   |
| -  | s (Concepts only), Principles of Intersection Design, Elements of Intersection   | ion Design, Cl   | nannel  | izatio  |
|  | n (Problems), Grade Separators.  |  |   |   |
|  |  |  |   |   |
|  | AFFIC MANAGEMENT   |  |   | 9   |
